

Reflector Holder Easy Manual

Reflector holder kit includes

1. Light stand
2. Plastic connector
3. Holder bar

Easy instructions

1. First see the image right side, there is 2 clips and 1 adjust knob
2. Extend the holder to the size of your reflector diameter
3. Use the adjust knob to make the left clip a little bit away from the connector on its right side. (so you can make the way in the 2nd img.)
4. Do as shown in the 2nd img. 1 after another, and get 1 side edge of reflectors clamped, and do the same way to clamp the other side. And better clamp the right side first.
5. After the above steps, the job is done. Just put your reflector holder on the light stand with the plastic connector.

Features:

1. We don't need additional big clamps to mounting the reflectors. (So Pls don't look for Clamps after you receive a reflector holder :)
